Soft skills

Working management

- I always list everything needed to build in feature breakdown table or in tree before starting projects
- Follow along with project progress and releasing requirements, I groups tasks in many milestone or target versions then set starting and due date for each.
- The working progress and percent done of tasks would be updated frequently.
- In the end of a working day, I will review all complete and incomplete issues to have an overview of current status and then I will list tasks + issues need to complete for tomorrow.

Team working skill

- Software and website development require working in team. Each member is responsible for appropriate tasks. Meetings are required to get team members updated project status.
- Team member needs to active in problem solving, in which they need to support or ask for support from others in case the issues can affect the project progress.
